

*"Insider Tips
from
a former
General Manager
of
a Leading
Online Casino
Group"*

Dear Friend,

For four years I was the General Manager of one of the Internet's leading online casino group and during this period I have been privy to the most incredible underhand tactics employed by some of my peers in the industry.

You see, we would regularly have meetings in one country or the other to discuss taking the industry forward, preventing underage gambling and most of all improving the bottom line.

Did you know there are over 2600 online casinos currently offering their services online?

Yes, and I would not hesitate to say that at least 50% are outright crooks who will refuse to pay you if you win. Another 25% are borderline meaning they may pay or not depending on the size of your winnings. Another 20% are trying their level best to be honest and become profitable but could easily tip to the other side. And finally there are 5% who are serious long term businesses intent on making a healthy contribution to society via this form of entertainment.

I would even go further and say there are probably about 20 to 25 online casinos who are just "**Top Of The Line**" casinos whom I would not hesitate to play at and would gladly recommend anyone to play there. I will not recommend any casinos until the end of this report but Sarah has been a friend of mine for many years and we have had many conversations in the past regarding how to recognize good, secure honest casinos from the rogue ones. Her website www.choosinganonlinecasino.com is in my opinion a very valuable resource available to online gamblers and I fully endorse her recommendations there.

Nevertheless getting back to this report, there are ways to significantly increase your chances of winning and to benefit in a positive way from playing at an online casino. Do remember however that casinos are in the business to make money just like any other business. The odds are inbuilt into each game and are in favor of the house at all times. Of course with some games if you know the right strategy you can significantly move the odds more in your favor. More detailed strategies and tips can be found at Sarah's site.

This report is not meant to be exhaustive but is a short, simple step by step approach to helping you Beat The Online Casinos.

Regards

Deryck

Increasing Your Odds of Winning at an Online Casino

- Never log on to play when you are under the influence of alcohol or drugs
- Ensure you are in a quiet place within your home or office or hotel room where you will not be disturbed and can concentrate on the game.
- Know the rules of the Game you intend to play BEFORE playing. Some casinos have varying rules.
- Know the rules regarding bonuses BEFORE accepting any. Particularly know the wagering requirements. Most casinos require you to wager 20 times the deposit plus the bonus received before you are allowed to cash any winnings. This is fair and most times these bonuses are well worth it.
- Blackjack is the most popular game played at most online casinos. You must understand Basic Blackjack strategy before playing and then move on to learning advanced strategies. You will find strategies for all games on [Sarah's Website](#).
- Start every session with a budget. If you lose it. STOP. Return another day. The stars are not in your favor 😊
- Decide on how much you want to WIN. When you win that amount, STOP. Move on to another activity.
- Always ensure your minimum bet is at least 1/20th of your bankroll.
- Always ask for more bonuses, see below for how to achieve this.
- When playing SLOTS, always play maximum pay lines, if you do not have enough money then simply reduce the size of your bet but play maximum lines otherwise leave immediately unless you want to donate your money to the casino.
- When playing progressive slots, know the history of when the machine paid out. If a progressive machine has a habit of paying every time the Jackpot reaches a specific figure then you should ONLY start playing when the Jackpot is slightly below that amount.
- Do NOT chase losses by making bigger bets.
- Attitude is everything, do not gamble if you have a "bad feeling" or you are feeling unlucky

Good Luck!

How to Tell Which Casinos to Avoid Like the Plague!

- If they do not have 24/7 Live Customer Service where you can talk to a real person run!
- Are they using software from a reputable company, a publicly listed company on one of the world's major stock exchanges. If not you need to do more research. Major software providers are Micro Gaming Systems, Playtech, Cryptologic and Real Time Gaming.
- How long have they been in existence? If over 8 years then this is a plus sign. If less than 1 year more serious research is needed.
- Where are they licensed? Good jurisdictions are the UK, Malta, Antigua, Isle of Man, Curacao and Kahnawake in Canada.
- Do they have a significant OFFLINE presence as evidenced by TV ads, radio ads, newspaper and magazines ads? These are all plus signs.
- Do they own and promote any major sporting clubs or other high profile offline businesses? These are good signs if yes.
- Do they feature in the Free Press for worthwhile events? These are excellent signs.
- Does their website have a high Google Page Rank in excess of 5. This is a very good sign.
- Do their deposit methods include direct debit from Local Banks in the major cities of the world. If yes, this relationship with the banking fraternity is a huge endorsement.
- Do they offer other services like online poker, bingo, mobile betting and sports betting, if yes these are positive signs.
- Are they a member of the IGC, Ecogra and other reputable watchdog agencies? If yes these are positive signs.

How To Get More Free Bonuses!

- You are not going to believe this but the simplest and easiest way is to ASK for one.
- Each time you are about to make a deposit, talk to someone on LIVE CHAT or on the phone and ask for a bonus, no matter how small. If you are winning then be reasonable and do not ask for one ok 😊
- By participating in tournaments and raffles that are on offer each week from the good reputable casinos.
- If you are making a withdrawal, then after you have clicked the withdrawal button but before the withdrawal is processed by the casino staff you should ask the customer service for a NICE bonus if you were to stop the withdrawal or part of it.
- Make friends with one or more of the customer service representatives then rest assured you will be the first to know of any new offers and you will never be turned down for any bonus request you make. Better yet if you are in a position to send a gift to the customer service department then do so. Even if it is a pizza delivery you bought online. The rules of the casinos say staff are not to accept gifts from players but trust me they will not turn away pizza!
- Offer suggestions to improve the bottom line of the casino and when you send it let them know if they accept it you will be pleased to accept a bonus as a token of appreciation. Suggestions may include how to improve customer service to recommending a popular promotion idea you might have or one you saw that was wildly popular at one of their competitors.
- Refer your friends to play at their establishment and you will receive a bonus.
- If in a given month or week or day you have lost X dollars playing then contact the manager and let them know how much you have lost and that you would truly appreciate 10% to 20% back to have a go at winning back something.

Which Games to Play & Which to Avoid

This is not a simple question to address since all games are gambling games and all have odds in favor of the house. Nevertheless there are some games that are more equal than others.

- Blackjack or 21 has the smallest edge in favor of the house and is most popular with online gamblers. In all the reputable casinos who only use trustworthy software the payout % on Blackjack is almost always 99% +. Blackjack is also a game of skill and if you are able to learn Blackjack strategy then you can reduce the casino's edge even further. Visit Sarah's site www.choosinganonlinecasino.com for more on Blackjack strategies. A recommended game.
- Video Poker is also a game of skill where the more skilled you are the better your chances of winning are. Again a highly recommended game to play.
- Roulette in my opinion is pure chance and a fun game. That's all it is. You will either lose or if you are very lucky you will win. The key is that if you win at roulette then stop playing, take your winnings and go otherwise you will lose it all back in the next couple of hours. People will talk about all sorts of strategies and Sarah mentions quite a few on her site but she also gives a caveat and rightly so that Roulette because of the betting restrictions tends to render most strategies useless after a certain betting threshold.
- Baccarat, great game and a lot of luck but it so much fun that all should play baccarat.
- Craps, again another game of pure luck and fun. Why not!
- Finally SLOTS. Everyone loves slots but unless you know the tricks you will lose more often than you will win. One most important tip is to ALWAYS play all LINES. Never play 1 or 2 lines a 5 or more line game, you are just giving money to the casino. Check Sarah's site for more tips on how to win at slots.
- Progressive slots. This is probably your best bet at becoming a millionaire overnight so if that's your goal then like myself you must play it. But again play all lines in a multi line game. Avoid progressive slot machines which very rarely pays out a winner. Check the casino service staff for when last the machine paid the Jackpot. So bottom line is you must avoid progressive machines which pay Jackpots infrequently and play those which pay Jackpots frequently.

Which Tournaments to Play & Which to Avoid

- If a tournament offered by the casino which is capable of having but does NOT have a LIVE leaderboard then do not play in it. It is too easy for a casino to pick a winner whom they wish to win and you would be none the wiser. This is why you will find with the highly recommended casinos like the ones on [Sarah's site](#) you will never ever face issues like these.
- However even supposedly LIVE leaderboards can be manipulated. Look out for the names displayed in the winning positions. If there are 5 prizes on offer, look at the names in those 5 positions from start to finish, if they never change or just interchange amongst themselves then most likely the board is being manipulated.
- Slots tournaments are based on luck and very difficult to manipulate and so are the safest to enter and try your luck in.
- Blackjack tournaments, unless they are offered by a reputable casino are very easy to manipulate and so I suggest you be very wary and do your due diligence on the casino before paying the tournament entrance fee.
- Throughout this report I have focused mainly on online casinos and not poker rooms. However poker rooms thrive on tournaments and these are all above board as you are playing against real people like yourself and not a random number generator. The only pre-requisite is that you must again choose a reputable poker room to play in as one that does not have an advanced collusion detection system could result in you losing a lot of money to players who collude with each other to beat all others at the tables.
- I have never seen Roulette, Keno, Craps or Baccarat tournaments being offered but if they were, these are games of luck and not skill and so chances of rigging are slimmer.
- Video Poker tournaments fall in the same category as Blackjack as it is a game of skill and so any leaderboard can be manipulated to favor a desired winner or winners. I suggest when you want to play Blackjack or Video Poker tournaments stick to the highly reputable casinos.

Recommended Online Casinos

I always recommend that at any point in time you have a minimum of 4 online casinos downloaded on your desktop. If on any given day you are unlucky in one of them then the other is just a click away. If however you always seem to lose at one or more then get rid of it from your desktop and put others until you can concretize the 4 you wish to play on all the time.

The following casinos have been around over 8 years, they are highly reputable and you will not face any of the negative issues mentioned above.

Both Sarah and myself offers the **UNCONDITUIONAL GUARANTEE** that should you play at any of these casinos and if for any reason you are unsatisfied we will be willing to mediate between the casino and yourself to resolve the issue. If we feel that YOU are in the RIGHT and the casino is wrong we will refund you the full first deposit you made at this casino up to a maximum of 100 in your depositing currency.
